NEW GOLD VEIN DISCOVERIES AT SAO CHICO, BRAZIL

Gold Aura Limited (GOA) reports the recent discovery of two gold bearing veins within the Sao Chico Exploration Licence (AP) area in Brazil. The veins, with grades of up to 20.1 g/t gold, are situated 1.8km north and 1.6km NNE respectively of the Sao Chico veins located to date in the SW corner of the AP (see the attached figure) and are exposed some 750m apart. Both veins trend at around 100 degrees magnetic and are steeply dipping. The discoveries highlight the potential for the discovery of further veins within the AP.

Vein 1

The vein situated 1.8km to the north is located within altered granite at the base of previous garimpeiro alluvial workings. The vein varies from a series of narrow stringers (up to a few cms) to a vein up to 0.5m in thickness. It has been shallowly worked (up to 5m depth) over a lateral distance of approximately 25m. During the progress of this work, a 70 gram gold nugget was located. Two rock samples were collected with the following results;

Sample No 1: Pyritic and iron oxide coated quartz vein – 15.1 g/t gold, 6.3 g/t silver
Sample No 2: Quartz vein with iron oxide coatings – 0.42 g/t gold, silver not detected

Vein 2

The other vein is up to 2m in thickness and has been shallowly worked (up to 10m depth) over a lateral distance of approximately 25m. Prominent irregular dark oxidised stringers after sulphides were noted. Visible gold has been seen in some of the oxidised stringers.

Four rock samples were collected with the following results;

Sample No 3: Altered granite, variable iron oxide and sulphides – 20.1 g/t gold, 7.6 g/t silver

Sample No 4: Similar to Sample No 3 – 6.05 g/t gold, 2.0 g/t silver

Sample No 5: Similar to Samples 3 & 4 – 1.42 g/t gold, 0.8 g/t silver

Sample No 6: Quartz vein with minor iron oxide and sulphide–1.2 g/t gold, silver not detected

Future Work

The occurrences highlight the interpretation that there are many more gold bearing veins to be discovered at Sao Chico under the extensive alluvial cover (up to 5m) and future exploration work will be directed towards this potential.

ABOUT GOLD AURA

Gold Aura's immediate focus is the completion of the merger with Anomaly Resources and the commencement of gold mining activities at the high grade gold project at Sao Chico in Brazil. It is also progressing its BacTech funded Joint Venture on Fergusson Island in Papua New Guinea and seeking a joint venture partner for its encouraging vein style polymetallic discovery (zinc-tin-copper-silver dominant) at Croydon in north Queensland.
